Software Required for FGDC Address Standard Workshop

Name	URL	Comments
FGDCAddressTool	http://meadow.spatialfocus.com/twiki/pub/Capgrant/WebHome/addressstool_cli.zip	The test data are here: http://meadow.spatialfocus.com/twiki/pub/Capgrant/WebHome/addressstool_cli_testdata.zip
Hyperlinked FGDC Address Standard	http://meadow.spatialfocus.com/twiki/pub/Capgrant/DeliveryMaterials/address_standard20120731.zip	This is largely HTML and CSS. There are, however, JQuery Javascript routines, so it is included with the software.
JAVA SE Runtime Environment-JRE 1.6.0.	http://www.oracle.com/technetwork/java/javase/downloads/jre7-downloads-1637588.html	FGDCAddressTool is being tested with build "1.6.0_30-b12"
GDAL 1.9	For 32 bit machines: http://www.gisinternals.com/sdk/PackagedList.aspx?file=release-1600-gdal-1-9-mapserver-6-0.zip For 64 bit machines: http://www.gisinternals.com/sdk/PackagedList.aspx?file=release-1600-x64-gdal-1-9-mapserver-6-0.zip	This is an ETL package, included in case we need it to load data.
PostgreSQL 9.1.4	http://get.enterprisedb.com/postgresql/postgresql-9.1.4-1-windows.exe	PostGIS should be included with the PostgreSQL download. After the point-and-click installation, a StackBuilder dialog comes up. If you expand the Spatial Extensions menu item, you should have the option to install PostGIS.
PostGIS 2.0.1	http://www.postgis.org/download/windows/pg91/postgis-pg91-setup-2.0.1-1.exe	See above. Since PostGIS is crucial it is included separately to avoid any chance of not having it.
QGIS 1.8.0	http://qgis.org/downloads/QGIS-OSGeo4W-1.8.0-1-Setup.exe	This is a spatial client for PostGIS.
